

R&D Positions in Electronics

Up to £40,000 depending on skills and experience.

Sharp Corporation is a leading global supplier in the manufacture of state-of-the-art electronics, with products ranging from advanced displays, solar cells and lasers, to stylish smart phones, 3D TV's and health appliances. At Sharp Laboratories we are committed to carrying out the research and development needed to create the electronics products of the future.

We are currently seeking talented electronics engineers to join our research activity. You should have:

- A strong academic background, with a 1st or 2:1 degree or higher degree in an electronics discipline
- Hands-on experience of electronics design
- A passion for turning great ideas into successful products
- Skills and experience in analogue/mixed-signal design at the PCB or transistor level is an advantage

We provide extensive training and development, the use of purpose built test laboratories, professional electronic CAD software and state-of-the-art cleanrooms.

We offer a dynamic working environment, competitive salaries, a pension scheme, life assurance, free gym membership, a subsidised restaurant and relocation assistance.

Apply directly to the HR Department by emailing your CV and a covering letter to
